

Co-Branded Partner Portal User Flow

1. Partner Landing Page Entry

User enters through a co-branded partner landing page.

Example:

We Must Vote × LegalEase

CTA:

Check for free

The page should make clear:

This free screening is provided through our partnership with [Partner Name].

No payment language should appear here.

2. Start Free Qualification Questionnaire

User starts the same free screening flow used on Expungement.ai.

Questions should determine:

- State where the case happened
- County/court, where relevant
- Arrest, charge, or conviction status
- Case outcome
- Waiting period issues
- Sentence/probation/fines completion
- Route-specific eligibility factors

No account required yet.

3. Qualification Result

When the user reaches a possible path, they see:

A path may be available.

Partner version copy:

Based on what you told us, there may be a record-clearing path available. Through our partnership with [Partner Name], you can continue to your Briefcase and prepare your packet at no cost to you.

Primary CTA:

Continue to my Briefcase

No CTA should say “Pay,” “Purchase,” or “Generate for \$50.”

4. Account Creation

After clicking **Continue to my Briefcase**, the user is asked to create an account.

Collect:

- First name
- Last name
- Email
- Password

The screening answers should be saved and attached to the user account so they do not have to restart.

The account should also preserve the partner attribution:

- Partner name
- Partner slug
- Campaign/source, if available
- State/jurisdiction
- Screening result
- Packet route

5. Email Verification

User verifies their email.

After verification, the system should recognize that this user came through a covered partner flow.

Instead of sending them to Stripe, redirect them directly to their Briefcase.

Copy after verification:

Email verified. Your Briefcase is ready.

CTA:

Go to my Briefcase

Ideally, this redirects automatically.

6. Skip Stripe Payment Gate

This is the key difference.

For partner-covered users:

No Stripe payment page. No \$50 fee. No payment prompt.

System logic:

If user source = covered partner portal, bypass payment and unlock Briefcase access after email verification.

The user should not see consumer pricing unless they later start a separate non-partner case.

7. Briefcase Landing

User lands in their Briefcase.

Personal greeting:

Welcome, Roger.

Partner-aware status card:

Your record-clearing packet is covered through [Partner Name].

Then:

We found a possible path in [State]. We need a few more state-specific details before your packet can be generated.

Primary CTA:

Finish my packet information

8. State-Specific Packet Builder

The Briefcase loads the correct state-specific Packet Builder based on the case state and route.

The questions should be unique to that state and case type.

The user should only be asked for information needed for that state's packet, such as:

- County
- Court
- Case number
- Charge/offense
- Disposition
- Arresting agency
- Sentence completion facts
- Waiting period facts
- Route-specific details

The system should allow responses like:

- I know this
- I do not know
- I need help finding this

Do not block packet generation just because the user still needs outside paperwork. Any required third-party forms, court records, certificates, fees, or supporting documents should be listed in the next-steps packet.

9. Generate Packet

Once the required packet-builder fields are complete, the user can click:

Generate my packet

The system generates:

- Prepared documents where available
- State-specific filing checklist
- Instructions for what to do next
- Required outside documents or official forms they may need before filing
- Expected fees, where known
- Filing location guidance
- Plain-English disclaimers

10. Briefcase Packet Ready

After generation, the Briefcase status changes to:

Packet ready

Primary CTA:

Download my packet

Secondary CTA:

View filing checklist

Partner-aware language:

This packet was prepared through LegalEase's partnership with [Partner Name].

11. Check Another Case

The menu should include:

Check another case

This lets the user screen another arrest, charge, conviction, or case.

Important distinction:

If the new case is still within the partner-covered program, no payment should be required.

If the new case falls outside partner coverage, the user can still screen for free, but the system may route them to the normal \$50 consumer packet flow.

12. Case Outcome Follow-Up

After packet generation, the Briefcase should motivate the user to return and update the case status.

Add a persistent card:

Tell us what happened with your case

Copy:

After you file, come back and let us know what happened. Your update helps [Partner Name] and LegalEase understand the impact of this program and improve record-clearing access for others.

CTA:

Update my case status

Possible statuses:

- I have not filed yet
- I filed my packet
- The court accepted my filing
- The court asked for more information
- My record was cleared
- My request was denied
- I need help understanding what happened

Clean Partner Flow

Partner landing page → Check for free → Qualification questionnaire → A path may be available → Create account → Verify email → Briefcase → State-specific packet builder → Generate packet → Download packet + filing checklist → Return later to report outcome

The core rule:

Partner users get the same experience as direct Expungement.ai users, but they bypass Stripe because the partner has already paid for access.
